

CENTER OF INNOVATION FOR MANUFACTURING

ABOUT US

The Center of Innovation for Manufacturing is the Georgia Department of Economic Development's key resource for providing expertise, facilitating connections, and supporting innovative programs that help Georgia manufacturers grow, prosper, and compete globally.

HOW WE HELP

The Center works with Georgia manufacturers of all sizes, from inventors to Fortune 500 companies, to help them solve challenging problems, and innovate their products, processes, and workforce.

We work directly with manufacturers to:

- Assess and understand their challenges and recommend next steps
- Identify and connect to the right resources in academia, industry, and government
- Facilitate collaborations that enable the manufacturer to overcome challenges and create solutions

We work in partnerships with manufacturers, academia, government, and other organizations to:

- Identify and support strategic programs that create growth opportunities for all Georgia manufacturers

PROJECT EXAMPLES

STARTUP COMPANY

Provided recommendations and connections for how to scale from prototype to low volume production.

MEDIUM MANUFACTURER

Identified contract manufacturers in Georgia to meet ESCOGO's unique requirements for bottling flammable products.

LARGE MANUFACTURER

Facilitated program with Georgia Tech researchers to develop new material and produce parts in test quantities.

PARTNERSHIP - WORKFORCE

Assisted in the creation of the Technical College Partnership Program between TCSG and GT to help students develop advanced technical skills for manufacturing.
